

Discover S4A Pulse Reports

Inspection Compliance

Measure and analyze if you are completing all inspections including regulatory inspections on time. With the ability to target specific piece of equipment or functional location, quickly look at historical data to see if there are any overdue inspections that could be problematic if you take into account aspects such as criticality.

Schedule Compliance

Measuring and looking at overall Schedule Compliance gives you an indication if how well your entire Enterprise Asset Management process is performing. This report gives you the ability to identify which business unit, area or region may need the most attention or help to meet their targets.

Mean Time Between Failure

Evaluate the historical mean time between failure at the equipment or functional location level. Then drill down to a specific piece of equipment that could have a potential breakdown event and interrupt productivity. With the ability to create alerts you can also try to stay ahead of problematic equipment and be informed when it has an event.

Backlog Monitor

Quickly visualize the state of your current backlog and ensure that high priority work is being done in time. This report gives enhanced visibility into historical backlog data and makes it possible to start looking for reasons why you may have just missed the mark.

Accenture Blueworx Materials Monitor

Our Blueworx reports are intended to provide insights into how users interactions with their BlueWorx are performing. The Materials Monitor will allow you to quickly identify commonly ordered materials, and even identify potential reasons why some materials orders fail.

Accenture Blueworx Sync Monitor

Where are most of our syncs being performed? Where are they failing? Who hasn't performed a sync today? These aspects and more can be investigated very easily with the Sync Monitor Report.

Connect

Connectors provide secure, optimized access to business data for tools like Power BI and custom applications. Built on OData, they connect downstream of established business rules and governance, ensuring reliable, trusted data for reporting and analytics.

Vastly improve the currency of your reporting and rely less on static daily reports.

- ✓ Near real time data that is ready to be plugged into our KPI Reports
- ✓ Can also be used to provide data for existing reports or databases
- ✓ Can be easily controlled with Neptune app or directly in SAP
- ✓ Ready to deliver over 700 data points from your SAP database
- ✓ Able to deliver data in multiple languages (English, Spanish, French, Portuguese)
- ✓ Easily deployable

Inform

Built for our Connectors, S4A Pulse helps to identify opportunities for improvement and potential automation.

A practical reporting solution that is based on industry standards and best practices set forth by partners of the Global Forum on Maintenance & Asset Management such as PEMAC.

- ✓ Reports are yours to customize and we are here to help!
- ✓ Ability to create alerts so you can be notified while working on other critical tasks
- ✓ Ensure consistent reporting across functional roles
- ✓ Near-real-time with ability to be refreshed every 30 minutes

You're connected and informed, so now it's time to act!

Being connected to the MS Power Platform means you can trigger flows through Power Automate to other Microsoft 365 apps and offload tasks that are routine.

In our next releases we will look to create flows based on requirements and insights from our customers.
