

S4A Balance Planning & Scheduling

Stay informed, plan accordingly, and maintain balance in your schedule

Your ultimate SAP® planning and scheduling solution

Tired of juggling multiple tasks, struggling with conflicting schedules, and feeling overwhelmed by the chaos of unscheduled work? S4A Balance is here to bring equilibrium to your planning and scheduling processes.

Craft Work Plans with Ease

Struggling with fragmented workflows, leading to missed tasks, project delays, and reduced efficiency? Balance is integrated with your ERP/SAP ensuring the details of your scheduling decisions aren't lost and are put into action from a single point of entry.

Optimize Workforce Utilization

Manual resource allocation can lead to overstaffing, understaffing, or mismanagement, which increases costs and reduces productivity. Balance automates resource assignments, making sure your team is always deployed where they're needed most.

Execute faster with Automations

Clunky, outdated tools slow down planning, causing frustration and costly errors. With Balance's easy-to-use interface, you can streamline planning and scheduling like never before.

Gain Real-Time Insights on Resource Management

Lack of real-time visibility can lead to bottlenecks, missed deadlines, and resource conflicts. Stay on top of resource availability with up-to-the-minute data. Real-time alignment between schedulers and field techs using BlueWorx means you can react on the fly and maximize productivity.

A Smooth, Intuitive Planning Experience

Clunky, outdated tools slow down planning, causing frustration and costly errors. With Balance's easy-to-use interface, you can streamline planning and scheduling like never before.

Adapt to Changing Requirements

Do you find yourself unable to pivot quickly, causing delays and cost overruns when unexpected changes arise? With Balance, you can easily adjust work plans on the go, guided by clear, actionable KPIs displayed at the top of your project plan screen. Make informed decisions in real-time, ensuring your projects stay on track—even when needs evolve.

Boost Asset Reliability and Reduce Downtime

Increased downtime, reduced productivity, and higher maintenance costs due to poor planning are the reality with outdated scheduling tools. With better planning and scheduling, Balance ensures that you'll have the required assets and equipment needed to complete the work.

Seamless syncing to
your SAP® data.

System Requirements:

S4A Balance requires an **SAP ERP System** (ECC v6+ or S/4 HANA), Neptune Software's **SAP Certified Add-on**, and lastly the installation of any other S4A applications of your choice.

Required SAP Modules

ECC: PM (Plant Maintenance), HR (Human Resources)
S/4 HANA: Asset Management, HR (Human Resources)

COMPATIBILITY:

All S4A applications are compatible with all modern browsers and optimized for all mobile devices¹ including Apple's iOS and Android. All software also meets accessibility standards.

**Online connection required.

TECHNICAL SPECS:

The underlying technology used by S4A Software is **SAP ABAP** for the backend logic, **JavaScript** for the frontend logic and **SAPUI5** (Fiori) for the look and feel.

All from a single code base controlled from within your SAP ERP system and managed using the familiar SAP Transports you trust.

CONFIGURATION:

All S4A software will include an administration application allowing you to control which apps are active, licenses, and any parameters available within each app enabled.

All S4A software also supports **multi-language** functionality, including the Neptune cockpit.

DOCUMENTATION:

All S4A products are backed with a full set of documentation for your users, management and functional teams.

- Functional & deployment guides
- User guides for each app
- Video walkthroughs for each app
- Access to support center
- Access to request new features
- Concierge onboarding
